

GRANULE TECH RANGE

PEARL BLITZ

BROADACRE

PEARL BLITZ

Pearl Blitz is a balanced compound fertiliser containing Phosphorous, Sulphur and Calcium in every granule ensuring even nutrient delivery across the paddock. It is ideal for pasture spreading or other situations where nitrogen is not required and where both Sulphur and Phosphorous are required.

Pearl Blitz has a consistent granule size where 90% of granules are sized between 2mm and 4.75mm, this allows for even distribution and spreading efficiency.

Pearl Blitz has a total phosphorous of 14.1% but a water-soluble component of 9.6% for high plant availability. It has a high phosphorous density to reduce application rates thus reducing freight and spreading costs.

Pearl Blitz has a higher sulphur content than triple-super phosphate, ideal for those soils where sulphur leaching and deficiency is a known problem.

Pearl Blitz is a well-balanced product and is ideal for those situations where growers require more phosphorous than single super but more sulphur than triple super.

APPLICATION RATES

Ground Spread: 50 – 250Kg
Banded at seeding: 50 – 120Kg

TYPICAL ANALYSIS

Major Elements	(w/v%)
Total Phosphorous	14.1%
Soluble Phosphorous	9.6%
Calcium	11%
Total Sulphur	7%
Sulphate Sulphur	4.5%
Elemental Sulphur	2.5%
