CELL-EX

BROADACRE

CELL-EX

CELL-EX is a Chelated foliar spray with an analysis of 5-6-5-5. This product is a true solution and has a broad spectrum of trace minerals along with 5 units of calcium. CELL-EX is unique because it combines plant-available phosphate with soluble calcium. By combining these two elements, calcium becomes mobile in the plant and migrates directly to key growth areas like the grain or seed heads. This process helps improve crop yield by enhancing grain fill or seed bulk, ultimately contributing to better harvest outcomes for broadacre crops like wheat, barley, and canola.

CELL-EX contains chelated trace elements to truly enhance effectiveness when used in a foliar spray. With proper soil fertility in conjunction with correct foliar applications to crops, CELL-EX creates a team that can't be beat. CELL-EX success is attributed to its properties allowing phosphate and calcium to penetrate the leaf surface—the way nature intended it to.

APPLICATION RATES

4-6 Litres per Ha
100 mL per Ha Magnify
80-500 Litres per Ha Water

**Store in a cool place away from sunlight.
Stir well before use.**

TYPICALLY RECOMMENDED CROPS

Cereal Crops: With first herbicide 2 applications - at flowering 2 applications

TYPICAL ANALYSIS

Major Elements	(w/v%)
Phosphorus	6.0%
Nitrogen	5.3%
Calcium	5.1%
